GET WITH THE PROGRAM... The Agricultural Pumping Efficiency Program

After hundreds of pump tests and retrofits and repairs – California Farmers are well on their way to reducing their energy costs and getting thousands of dollars of their money back through the Agricultural Pumping Efficiency Program.

If you haven’t gotten with the program yet – here’s another chance. APEP has been refunded and will continue to help farmers identify the hidden costs in operating an inefficient electric or natural gas irrigation pump. For more details call:

(800) 845-6038 or visit www.pumpefficiency.org

All owners or users of an electric or natural gas utility account that is used for production agriculture or landscape irrigation, who are paying the Public Goods Charge (normally customers of PG&E, SCE or SDG&E – SDG&E customers should call first to check on their eligibility), excepting local, state and federal governments, are eligible to participate in the Program.

Applications for retrofit/repair are accepted on a first-come, first-served basis until available funds are allocated or the ending date of the program, whichever comes first (visit www.pumpefficiency.org or call (800) 845-6038 for more information).

California consumers are not obligated to purchase any full fee service other service not funded by this program. This program is funded by California utility ratepayers under the auspices of the California Public Utilities Commission.

Get the Message to Your Group or Organization!
APEP is actively seeking partners to present the message of pumping efficiency to California agriculture. We can be part of one of your events or you can be part of one of our scheduled seminars. Call us today to schedule an event in your area.
